

## OUR KNOW-HOW FOR YOUR IDEAS

### OUR TEAM

Specialists from the fields of computer science, electrical engineering and physics

### OUR EXPERTISE

Industrial measurement technology  
Image processing  
Embedded systems  
System-related software  
Embedded Linux

### OUR SERVICES

Product development  
Tool development (test, build tools)  
Prototype development  
Consultancy

## OUR STANDARDS - OUR SERVICE

Everything from a single source and always at your side:

Agile project management - partnerships with technology providers - close collaboration with our customers' research and development departments - continuous training of our employees

Our service portfolio includes a wide range of relevant programming languages, communication protocols, current technologies, various development systems and target platforms. We have extensive experience in overcoming challenges and are able to successfully implement complex projects.

Our expertise spans a wide range of industries and application areas, which enables us to develop customised solutions for each project.
